| Padlock Icon   |                          | X                             |
| Hologram Foil  |                          | X                             |
| Heat-reactive Ink  |                          | X                             |
| Prismatic Background Pattern   |                          | X                             |
| Check Border   |                          | X                             |

 Exclusive Feature of our Checks

## / STANDARD PERSONAL CHECKS

We are committed to finding new and innovative ways to protect consumers from check fraud.

### 1 Security Weave®

This is a highly intricate design that is extremely difficult to duplicate.

### 2 Micro Print

There is a fine line of type on the check that can be read when magnified and that is very difficult to photocopy.

### 3 Security Screen

The screen ensures that the words “Original Document” will fade, distort or disappear if a check has been copied or scanned by traditional means.

### 4 Photo Safe Deposit® Icon

Provides indication that security features are incorporated on the check

### 5 ImageMatch®

MICR information, check number, and the customer name is printed on both sides of the check, providing the ability to visually verify that the back image and the front image belong to the same check.

### 6 MobileMark®

A checkbox that allows customers to keep track of checks deposited via mobile deposit capture and helps avoid unintended duplicate deposits of the same check.

### 7 Fugitive Ink

Chemical alterations may cause extreme discoloration, and washing the check will likely cause details of the back to fade or disappear.

### 8 Security Warning Box

The box on the back of the check gives a checklist of security features present on the check.

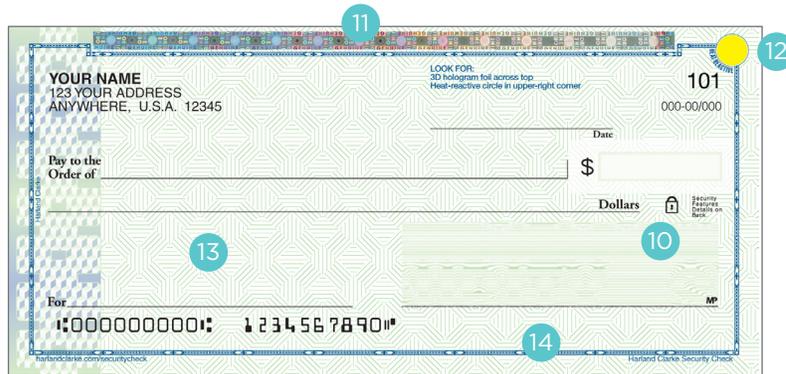

### 9 Security/Safety Paper

If common chemicals are used to change the original information on the check, brown stains or color bursts will appear.

**Our goal is to stay ahead of fraud and make it difficult for criminals to counterfeit checks or fraudulently deposit checks remotely.**

## / HIGH SECURITY PERSONAL CHECKS

Vericast is committed to finding new and innovative ways to protect consumers from check fraud.

## / ADDITIONAL FEATURES

- 10 Padlock Icon**  
Provides indication that there are security features incorporated on the check.
- 11 Hologram Foil**  
This feature provides a reflective, three-dimensional appearance easily seen with the human eye, and not easily reproduced by ordinary copying or printing.
- 12 Heat-reactive Ink**  
Located in the front-upper right-corner, this ink fades from green to yellow when warmed. This feature provides verification of check authenticity and guards against color photocopying.
- 13 Prismatic Background Pattern**  
An attractive woven background pattern deters fraud attempts as colors become distorted when copied.
- 14 Check Border**  
This feature decreases the ability to counterfeit the check.

---

**As an innovator in check security,  
we believe protection is prevention.**
